

FIGILE TRENSFORMETIC

Leveraging current business technology and teams to build and promote an agile framework.

CHALLENGE

A backload of projects created a demand for redefining priority work and developing a better workflow process

SOLUTION

Implemented a coaching strategy that paired coaches with Scrum Masters and product owners through two full sprints

Utilized immersive training including a three-day process improvement approach using real projects and deliverables

RESULTS

Reviewed and assessed project backload to define new processes, roles and responsibilities.

CHALLENGE

Current product portfolio no longer met market demand requiring a transformation

SOLUTION

Implemented full agile framework engaging all lines of business

Led project recovery efforts

Created Dev/Ops environment and product organization

Utilized two-day immersive training leveraging real project data

RESULTS

Created customer-centric product development across all lines of business and increased quality assurance requirements

Embracing Agile can be a daunting task. It doesn't happen overnight and if done too hastily, it can become counter-productive and full of risk. Agile practices are best learned and implemented through experience.

No two organizations are alike, so we take the time to learn current business practices, processes and culture to develop a plan that leverages the technology and business teams already in place. Then we pull in some of the best Agile coaches and project leaders around the country to create an Agile framework that best aligns with each organization.

Depending on the competencies and structures of the organization, we use many different training and coaching techniques. In all cases, we promote an Agile framework that's easy to learn, adopt, and continuously implement even after the project ends.
